## Create an Application

The screenshot shows the Oracle APEX application creation interface. It features three main options:

- New Application**: This option is highlighted with a large red circle. It includes a icon of a database table with a pencil, a brief description, and a detailed explanatory paragraph.
- From a File**: This option includes a icon of a CSV file, a brief description, and a detailed explanatory paragraph.
- Productivity App**: This option includes a icon of a downward arrow, a brief description, and a detailed explanatory paragraph.

At the bottom of the interface, there are links for Websheet, Quick SQL, Copy Application, and Help.

# APEX added value

The screenshot shows the Oracle APEX Shared Components interface. The top navigation bar indicates "Application 104 \ Shared Components". The interface is divided into three main sections: Application Logic, Security, and Other Components.

- Application Logic:** Contains links for Application Definition Attributes, Application Items, Application Processes, Application Computations, Application Settings (which is highlighted with a red box), and Build Options.
- Security:** Contains links for Security Attributes, Authentication Schemes, Authorization Schemes, Application Access Control (which is highlighted with a red box), Session State Protection, and Web Credentials.
- Other Components:** Contains links for List of Values, Plug-ins, Component Settings, Shortcuts, and Email Templates (which is highlighted with a red box).

# APEX Application Settings

## 6 APEX\_APP\_SETTING

The APEX\_APP\_SETTING package provides utilities you can use when programming in the Oracle Application Express environment related to application setting shared components. You can use the APEX\_APP\_SETTING package to get and set the value of application settings.

[SET\\_VALUE Procedure](#)

[GET\\_VALUE Function](#)

The screenshot shows an Oracle SQL Worksheet interface. The top tab bar has 'Worksheet' selected. The main area contains the following SQL code:

```
select name
      , apex_app_setting.get_value(p_name => name) as val
      , on_upgrade_keep_value
  from apex_application_settings
 where application_id = 102;
```

Below the code, there are tabs for 'Script Output' and 'Query Result'. The 'Query Result' tab is active, showing the results of the query:

| NAME                    | VAL      | ON_UPGRADE_KEEP_VALUE |
|-------------------------|----------|-----------------------|
| FEEDBACK_ATTACHMENTS_YN | Y        | Yes                   |
| ACCESS_CONTROL_SCOPE    | ACL_ONLY | Yes                   |

At the bottom of the results panel, it says 'All Rows Fetched: 2 in 0,03 seconds'.

# APEX Application Settings

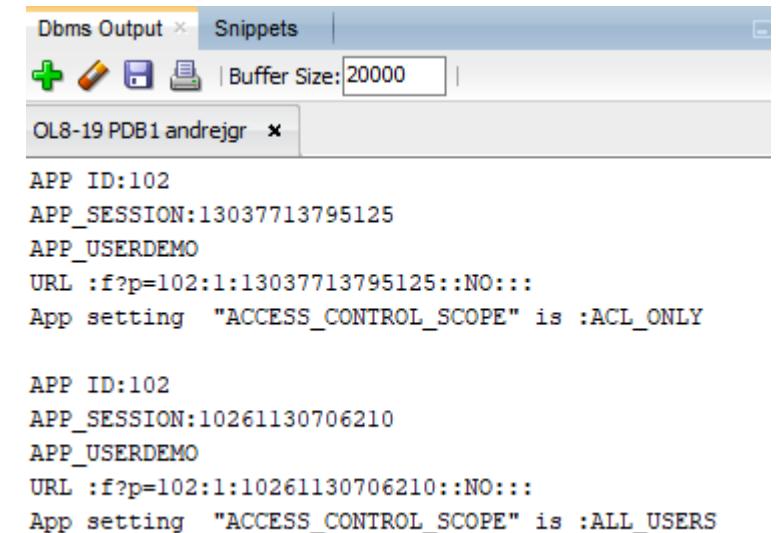

```
declare
  l_value varchar2(4000);
begin
  apex_util.set_workspace('ANDREJGR');
  apex_session.create_session (p_app_id  => 102
                               , p_page_id => 1
                               , p_username => 'DEMO');

  dbms_output.put_line('APP ID:' || v('APP_ID'));
  dbms_output.put_line('APP SESSION:' || v('APP_SESSION'));
  dbms_output.put_line('APP_USER'|| v('APP_USER') );
  dbms_output.put_line('URL:'|| apex_page.get_url);

  l_value := apex_app_setting.get_value( p_name => 'ACCESS_CONTROL_SCOPE');

  dbms_output.put_line('App setting "ACCESS_CONTROL_SCOPE" is :'|| l_value);
  apex_session.delete_session (p_session_id => v('APP_SESSION'));

end;
/
```

The screenshot shows the Oracle SQL Developer interface with the 'Dbms Output' tab selected. The window title is 'Snippets'. The buffer size is set to 20000. A single session named 'OL8-19 PDB1 andrejgr' is listed. The output area displays the following information:

```
APP ID:102
APP_SESSION:13037713795125
APP_USERDEMO
URL :f?p=102:1:13037713795125::NO:::
App setting "ACCESS_CONTROL_SCOPE" is :ACL_ONLY

APP ID:102
APP_SESSION:10261130706210
APP_USERDEMO
URL :f?p=102:1:10261130706210::NO:::
App setting "ACCESS_CONTROL_SCOPE" is :ALL_USERS
```

# APEX Application Settings

## Administration

The screenshot displays the APEX Application Settings interface, organized into several sections:

- Configuration**: Includes [Configuration Options](#) (Enable or disable application features).
- User Interface**: Includes [Theme Style Selection](#) (Set the default application look and feel).
- Activity Reports**: Includes [Dashboard](#) (View application activity metrics), [Top Users](#) (Report of page views aggregated by user), and [Application Error Log](#) (Report of errors logged by this application).
- Access Control**:
  - Text: Only users defined in the application access control list may access this application.
  - Administrator**
  - Contributor**
  - Reader**
  - Users** (highlighted with a red circle)
    - Change access control settings and disable access control
  - [Access Control](#) (Set level of access for authenticated users of this application)
- Feedback**: Includes [Acknowledged](#), [Closed](#), and [No Action](#).

[APEX\\_APPL\\_ACL\\_USER\\_ROLES](#)

[APEX\\_APPL\\_ACL\\_ROLES](#)

## 2 APEX\_ACL

The `APEX_ACL` package provides utilities that you can use when programming in the Oracle Application Express environment related to application access control shared components. You can use `APEX_ACL` package to add, remove, or replace user roles. You can also take advantage of `INSTEAD OF` trigger on `APEX_APPL_ACL_USERS` view to edit user roles with DML statements (`INSERT`, `UPDATE`, and `DELETE`). If the package is used outside of Oracle APEX environment, the `security_group_id` must be set using either `APEX_UTIL.SET_WORKSPACE` or `APEX_UTIL.SET_SECURITY_GROUP_ID` before the call. The related APEX views to get more information on application users and roles are `APEX_APPL_ACL_ROLES`, `APEX_APPL_ACL_USER_ROLES`, and `APEX_APPL_ACL_USERS`.

## 25 APEX\_MAIL

You can use the `APEX_MAIL` package to send an email from an Oracle Application Express application. This package is built on top of the Oracle supplied `UTL_SMTP` package. Because of this dependence, the `UTL_SMTP` package must be installed and functioning to use `APEX_MAIL`.

`APEX_MAIL` contains three procedures. Use `APEX_MAIL.SEND` to send an outbound email message from your application. Use `APEX_MAIL.PUSH_QUEUE` to deliver mail messages stored in `APEX_MAIL_QUEUE`. Use `APEX_MAIL.ADD_ATTACHMENT` to send an outbound email message from your application as an attachment.

Oracle Application Express installs the database job `ORACLE_APEX_MAIL_QUEUE`, which periodically sends all mail messages stored in the active mail queue.

### Note:

In order to call the `APEX_MAIL` package from outside the context of an Application Express application (such as from a Database Scheduler job), you must call `apex_util.set_security_group_id` as in the following example:

```
for c1 in (
    select workspace_id
    from apex_applications
    where application_id = p_app_id )
loop
    apex_util.set_security_group_id(p_security_group_id =>
c1.workspace_id);
end loop;
```

## Manage Log Interval

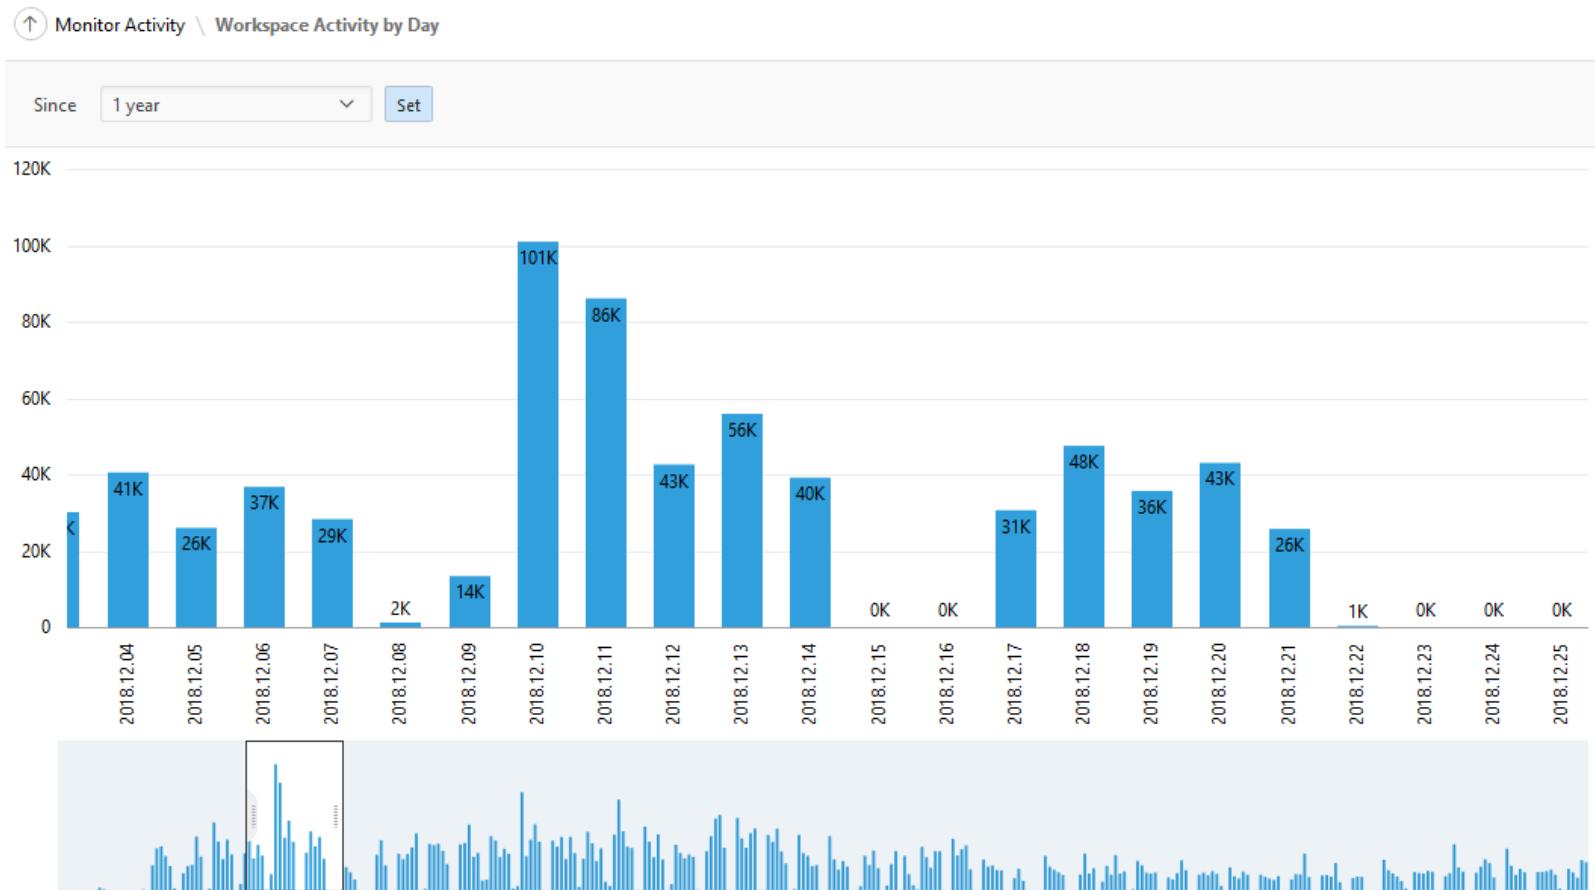

Set the minimum number of days to retain the log information for the specified logs. The maximum value that can be specified is 180 days, with a default value of 14 days. Keeping log information for longer periods can degrade runtime performance.

Logs are implemented using two underlying tables, with a switch between the log tables after the number of days specified in "Log Switch After Days".

| Log Name ↑≡              | Log Switched Date      | Log Switch After Days |
|--------------------------|------------------------|-----------------------|
| Access Log               | 09/24/2019 12:00:00 AM | 14                    |
| Activity Log             | 09/24/2019 12:00:00 AM | 14                    |
| Debug Messages           | 10/03/2019 12:00:00 AM | 14                    |
| External Click Count Log | 08/01/2019 12:00:00 AM | 14                    |
| Web Service              | 08/01/2019 12:00:00 AM | 14                    |
